1. Declaration

I, Aryan Cyrus, declare that this assignment, titled [Assignment Title], is my own original work and has not been copied from any other source except where explicitly acknowledged. I have not engaged in plagiarism, collusion, or any other form of academic misconduct in the preparation and submission of this assignment. All sources of information and data used in this assignment have been properly cited and referenced in accordance with the prescribed guidelines. I have not used unauthorized assistance in the preparation of this assignment and have not allowed any other student to copy my work. I am aware that any breach of academic integrity may result in disciplinary action as per the policies of Monash University, which may include failing this assignment or the course, and further academic penalties.

2. Github Check

Enter your Github details here.

Github Username *Enter your username here*	CYR0006-Code
Repository Shared? *Have you started and shared your assignment repository with your tutor yet?*	Yes: *CYR0006-Code/FIT5032-eFolio at A1*

3. Self-Evaluation

Rate your performance for each criteria. Put a ✅(tick) in the box where you think your work belongs.

Criteria	Exceeds Expectations	Meets Expectations	Needs Improvement	Fail to meet expectations
BR (A.1): Development Stack and Coding	✅			
BR (A.2): Responsiveness	✅			
BR (B.1): Validations	✅			
BR (B.2): Dynamic Data & Data Structure	✅

5. Reflections: Challenges

What has been the most challenging part of this assignment for you? How has this stretched you as a programmer?

The most difficult for me was formatting. A modern web development project contains many elements, libraries and frameworks. These frameworks, files and dependencies often conflict with one another or need to be managed properly,

One example of this is in formatting. I found formatting (ensuring that each element is in precisely the correct position) to be difficult. I encountered the following issues specifically:

1) Syntax: Web development has CSS of various types including tailwind. Finding the syntax to achieve the effect that one needs is a challenge
2) Conflicts: I use 3 main ways to style and element:
    - Inline CSS
    - CSS files
    - Styling inherited from the component library (for example Primevue)

    I find that sometimes these interfere with one another. For example I had a case where my outer most div of the events page was NOT centering its items despite me setting margin to auto.
    I later found that my base.css has set margin left to 0. Because CSS biases exact numbers (e.g. margin left 0) over vague declarations (margin auto), the page would not centre no matter what I introduced into my events page.

    The result: I spent 1 hour trying to move my events grid to the centre of the page. This has thus tested my ability to view a formatting issue, and consider ALL forms of interference to identify the precise code which is causing the issue.

6. Declaration: Additional Help

Any tools that you used (including Gen AI or existing code reuse) must be declared here.

Note: GenAI is not allowed for coding purposes in any assignment,

However, you may use GenAI for brainstorming, problem solving and learning. You need to declare all such uses here. One row per help used. More details on how to acknowledge the use of Gen AI can be found here.

Name	Description

Claude for syntax	*I use Claude on an ongoing basis to find out the syntax for positioning and formatting elements.*
Claude for identifying the source of formatting issues	*I used claude to troubleshoot formatting issues, and specifically the source of particular issues whose source I could not easily identify. By learning how elements and their styling is managed, I was able to troubleshoot formatting and alignment mismatches.*
