Section 1: Executive Summary

The client's focus is on climate action, environmental resilience and sustainability, and supporting vulnerable groups. A key vector for doing this is through the use of innovative digital solutions. One domain in which all of these factors coincide is vegetation and canopy cover.

Canopy cover is unevenly distributed across Melbourne, and low-canopy areas tend to be lower-income. For example Melbourne's west has the lowest level of canopy cover at just 5.5% while the east is far greener at 25.9% (*Melbourne's Vegetation, Heat and Land Use Data*, n.d.)[14]. Lower canopy areas are known to be far hotter in summer due to the heat island effect. The lack of shade and cooling alone impact the physical and mental health of residents in Melbourne's least well off areas. Other negative ramifications include poorer air quality, higher flooding risk, and lower biodiversity.

In order to fulfil the client's goals of local climate action and environmental sustainability for underrepresented communities, the proposal is an urban greening, tree-planting & biodiversity guide called Girt by Green.

The main aim of this is to help show the state of vegetation cover and biodiversity in an area, and give the tools (species guides, planting tips, ratings/reviews of resources) to make changes locally. This is to be used by residents, community groups, or any other entities to make it easier for people who don't currently have gardening/greening resources at hand to plant the right things in the right places. Thus the 2 key goals of this solution are:

- Displaying biodiversity and canopy cover geographically: This allows urban canopy to be monitored geographically, and for planting initiatives to target areas where planting is most effective, or is needed most
- Providing stakeholders with resources on what to plan, where, when and how thus reducing the barrier to entry.

In the long-term, the initiative aims to increase local tree canopy and biodiversity, suburb by suburb, by lowering the information and action barrier for residents. Given the benefits of tree cover outlined above, the case for investing in an urban canopy is clear, and has far reaching implications.

Section 2: Sitemap

Purpose of each main section

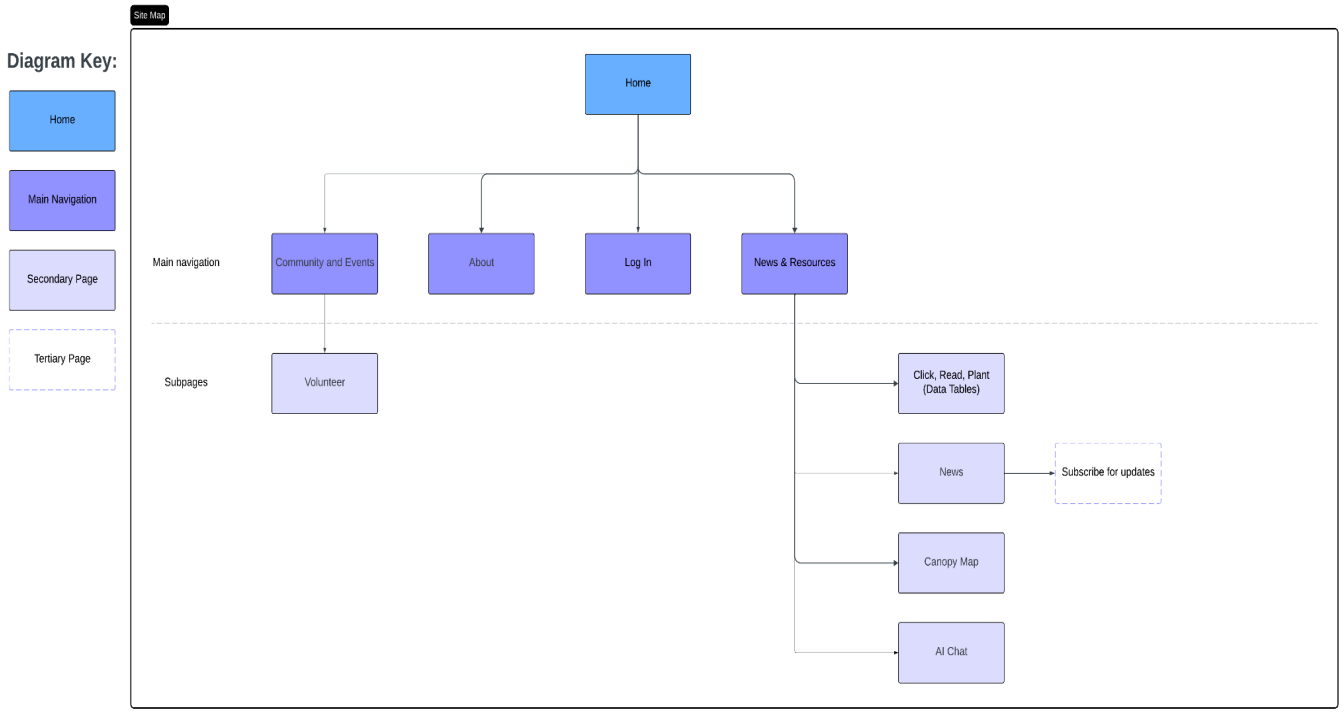

Home: This is the home/landing page of the website. It will be the starting point from which any part of the website can be accessed through the available links. The main body itself will show notable or important content such as the latest news, key links (such as AI chat or maps) as well as an aesthetically pleasing landing section to draw the attention of the reader, while remaining sleek, user friendly and useful.

Log In: This is where any given account holder will be able to use their authenticated username/password to log into their account. There will also be at least 1 admin account which can be accessed by using the admin email and password. If a person does not have an account, this will also allow them to sign in or reset their password.

About: This section will describe the use, goal and features of the "Girt by Green" web app. It will also contain the contact details of the admins, in case users need to contact them.

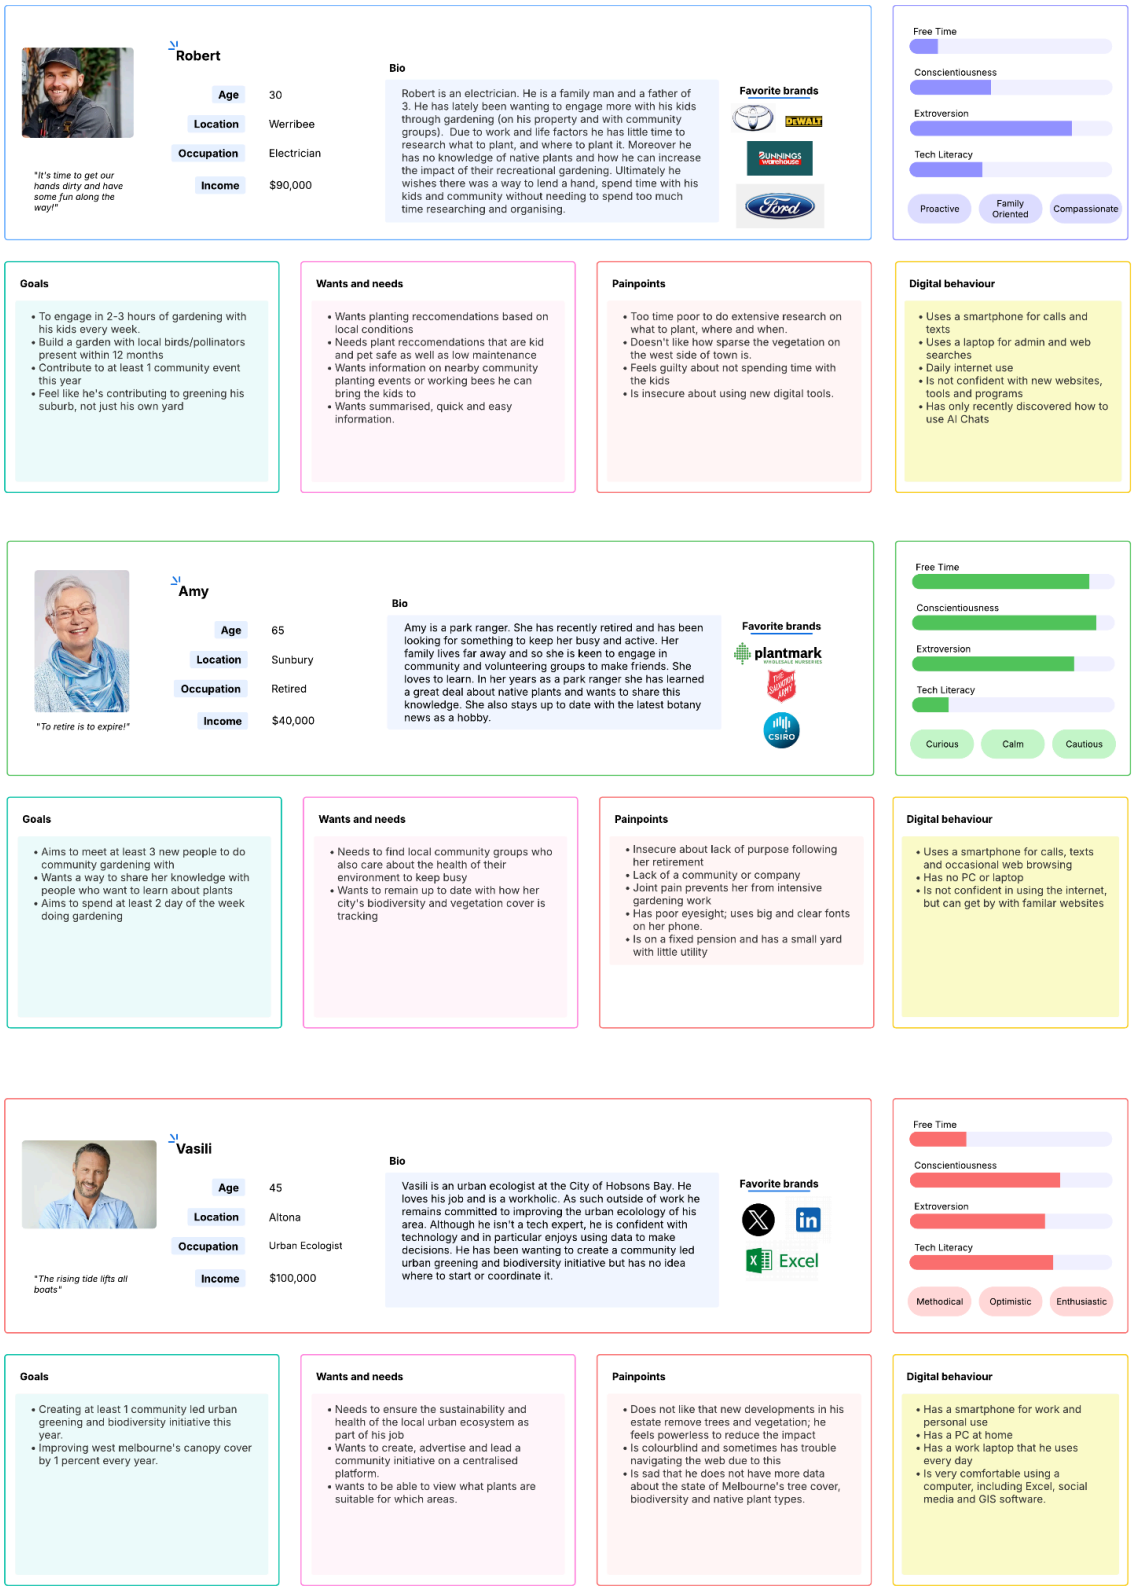

Community and Events: This is a section where any registered group can advertise themselves and their activities. Users will be able to see events, the managing community group and the details of said events.

News and resources: This is the page from which the bulk of the major website functions will be accessible (tables, maps, AI chat, news etc). Its goal is to make it easier to see all key features in one place, allowing users to visit the resources they need easily and quickly.

How the web application will address their specific requirements

Robert:

- Robert wants quick and easy information; the specialised AI chat is perfect for this as it can simply answer Robert's questions without Robert needing to search for hours. Robert is already working with AI and will find this familiar to work with.
- Since Robert aims to spend more time with his kids, especially at community events, the Events and communities page is useful in this case.

Amy:

- Amy has eyesight problems. Given that the website will enforce WCAG 2.1 accessibility standards at the AA level; this will assist Amy in using the website easily. This is especially important for her as she is not tech savvy, and being able to see the content removes yet another layer of difficulty for her.
- Since Amy is not tech savvy, she may also find it difficult to use the mapping services or the AI chat to "keep up to date with her city's vegetation cover progress". As such the "News" page is a more summarised and user friendly distillation of this which she can even subscribe to for weekly emails.

Vasili:

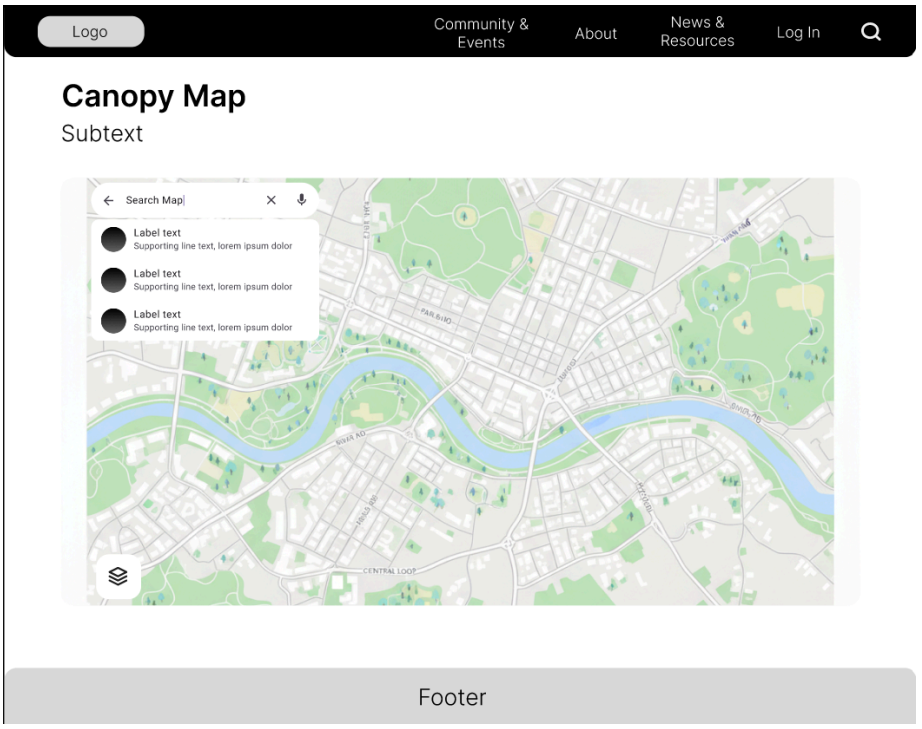

- Vasili wants to create and lead community events; this Girt by Green platform enables this by allowing community groups to register themselves and post on the Community and events page
- Vasily has a deeper interest in monitoring Melbourne's canopy cover and biodiversity. The Canopy cover map is an excellent way of tracking this quantitatively.

Declaration: Additional Help

Any tools that you used (including Gen AI or existing code reuse) must be declared here.

Note: GenAI is not allowed for coding purposes in any assignment,

However, you may use GenAI for brainstorming, problem solving and learning. You need to declare all such uses here. One row per help used. More details on how to acknowledge the use of Gen AI can be found here.

Name	Description
Claude used for persona refinement	*I used Claude to explain what the key pillars of a good persona include as I felt that my initial draft did not represent the target demographics well enough.*
